

A **Matterport Space** is a complete, three-dimensional representation of a real-world location created from 2D (RGB) imagery and 3D data from the Matterport Pro or Pro2 3D Camera. A Matterport Space can be navigated on a desktop or mobile web browser, and in virtual reality through a Samsung Gear VR, Google Cardboard, or Google Daydream.

Combined with seamless hosting and our web player called 3D Showcase, Matterport Spaces create a complete 3D media ecosystem for businesses to leverage 3D models of real places for many purposes — property marketing, construction, facilities management, and news/entertainment.

Matterport 3D Spaces are perfect for:

RESIDENTIAL REAL ESTATE MARKETING

Now online buyers can virtually tour any listing to truly understand the layout, feel, and flow. Spaces can also be used to generate 2D photography, schematic floor plans, and video for every marketing channel. Our 3D real estate photography professionals are in every US state and over 70 countries around the world.

RENTAL COMMUNITIES (e.g., Apartments, AirBnB, etc.)

Use Matterport to triple engagement with their online listings and drive qualified leads to multifamily communities. It's the perfect way to showcase amenities and let renters tour each and every unit.

ENGINEERING & CONSTRUCTION

Generate automatically registered colored point clouds for as-builts, or use Spaces to document construction milestones and generate real-world *punchlists* with 2D photography. Great for monitoring and documenting works in progress.

NEWS & ENTERTAINMENT, EVENTS (with people included)

Put your audience inside the news. Enhance your reporting by capturing the scene of the action and offering your audience a one-of-a-kind look into the stories you deliver. Create memorable events.

GO MOBILE - 3D SHOWCASE FOR IOS ON IPHONE + IPAD

Our native iOS app is great for presentations, demos, or just browsing interesting new Spaces. 3D Scanning Services can create an immersive 3D model viewable on mobile.
